

error log : My Savings

```
datafile = new File("C:\\Users\\27355005\\git\\CS30-period-3-Fall-2024\\chapter11\\src\\masteries\\mysaving");
FileOutputStream out = new FileOutputStream(datafile);
ObjectOutputStream outt = new ObjectOutputStream(out);

outt.writeObject(bank);

out.close();
outt.close();
```

My first error was miss placing my close statement, so that it wouldn't work

```
if (choice ==1)
{
    System.out.println(bank);
}
else if (choice ==2)
{
    bank.Addpenny();
}
else if (choice ==3)
{
    banks.Addnickle();
}
else if (choice ==4)
{
    banks.Adddime();
}
else if (choice ==5)
{
    banks.Addquarter();
}
else if (choice ==6)
{
```

My second and last mistake was adding an s to my bank object name, so it wouldn't work. Muscle memory is bad
