

ERROR LOG : Vehicles

CREDIT NAME: Object oriented Programming 2

```
minivan usermini = new minivan(0, 0, 0, 0, 0, false, false);
usermini.setBSE(backseatent);
usermini.setsunroof(sunroof);
usermini.settirenum(tirenum);
usermini.setcargosize(cargosize);
usermini.setfueleconC(fueleconcity);
usermini.setfueleconH(fueleconhwy);
usermini.setseatingcapa(seatingcapacity);
System.out.println(usermini);
System.out.println(" ");
```

I forgot a semi-colon on one of my system.out.prints and i fixed it after running it once.

```
public truck(double cs, double tn, double fec, double feh, double sc, double b) {
    super(cs, tn, fec, feh, sc);
    b = backbed ;
}
}
```

I also put my method variable before the class variable, I noticed after I tested it and nothing came up for truck class.
