ERROR LOG : Uemployee
CREDIT NAME: Object oriented Programming 2

```java
public Double setsal(Double S)
{
    sal = Ss;
    return(sal);
}
```

I misclicked my s key and it made the method not work when I tested it.

```java
package Masteries.UEmployee;

private String Title;

public class Staff extends UEmployee{
```

I put my string outside of my main public class and spent 20 minutes being confused.
